

Guarantee your customers **100% uptime**

- Netnod's rock-solid DNS services **for partners**

DNSNODE - the benefits

100% uptime across one of the largest and most robust anycast networks in the world

Intelligent connections that optimise routing, reduce latency and improve end user experience

Industry-leading security and resilience against DDoS attack

An advanced monitoring system and 24/7 support

Why choose Netnod?

As a neutral organisation, Netnod does not run a competing registry business and has no conflict of interest in the DNS market. We value transparency and neutrality and are committed to standards-based Internet development. We have built one of the largest server footprints in the world and can provide industry-leading DNS expertise.

When it comes to DNS, you can't risk failure. Your customers need 100% availability which means you need a partner you can trust.

As the operator of a root server, and the provider of choice for some of the largest TLDs, Netnod has been ensuring the stability and security of critical DNS infrastructure for more than 20 years.

With Netnod's DNSNODE service, you can provide your customers with TLD-grade DNS anycast. Together with 24/7 support and a 100% uptime guarantee, you receive all the benefits of joining one of the most resilient, robust, and advanced anycast networks in the world.

Secure your DNS services

If you use just one DNS provider or solution, you expose your customers to unnecessary risk. Adding Netnod's DNSNODE service is a simple, cost-effective way to improve resilience, reduce latency and protect your customers against DNS outage.

"Anyone who knows about DNS trusts Netnod."—Jakob Schlyter, IT Security Advisor, Kirei.

The benefit of anycast

Anycast DNS enables many independent servers to share the same IP address. With anycast, you seamlessly maintain identical data sets at all locations. This brings your DNS services closer to end users reducing latency while improving redundancy and resilience.

The benefits of the DNSNODE anycast service also include simplified DNS management, improved load sharing and DDoS mitigation.

DDoS mitigation

DDoS attacks can have a serious impact on your business. Our DNSNODE platform protects you by providing:

- One of the most robust and advanced anycast networks in the world
- Expertise in profiling and mitigating DDoS attacks
- A range of tools that can filter out bad traffic and isolate attacks

“Netnod understand our business. Their DNS specialists have supported us all the way.” –Neil Dundas, CEO, Domain

Name Services (Pty) Ltd.

About Netnod

With more than 20 years of experience at the core of the Internet, Netnod has the established expertise for providing critical infrastructure support, ranging from DNS services and root server operations to Internet exchange points and Time and Frequency services..

Partnership opportunity

- 24/7 support and 100% uptime guarantee
- A quick setup process, no contract lock in and a simple pricing structure
- Unlimited number of zones and no query limits
- Best-in-class APIs enabling smooth integration with leading provisioning platforms
- Advanced monitoring and statistics engine developed in cooperation with partners
