netnod

Guarantee your customers 100% uptime by using one of the largest and most robust DNS anycast infrastructures in the world.

The Netnod Advantage

- More than a decade of experience running DNS anycast slave services with 100% uptime for some of the world's largest TLDs
- Expertise in security and stability developed over 20 years of running the i.root-servers.net service
- Global network presence with intelligent local connections based on advanced network architecture
- A key player in the IXP community with an ever-expanding network based on thousands of peering arrangements
- A resilient network designed for robustness and DDoS mitigation
- Security and standards compliance including DNSSEC and IPv6

When it comes to DNS, you can't risk failure. Your customers need 100% availability which means you need a partner you can trust. Connect to DNSNODE now and offer your customers a DNS slave service from the established experts in DNS anycast service. With Netnod's DNSNODE service, you can offer TLD-grade anycast to your business and enterprise customers.

Together with 24/7 support and a 100% uptime guarantee, you receive all the benefits of joining one of the most resilient, robust, and advanced anycast networks in the world.

As anycast pioneers, Netnod has established a track record of providing 100% uptime across a global network. With Netnod's DNSNODE service, you benefit from an industry-leading network that guarantees reliability, reach, and resilience. To ensure the Internet presence of your customers, contact us now to discuss how the DNSNODE slave service can help your business.

About Netnod

Netnod operates Internet Exchange Points and the i.root-servers.net service as a non-profit organisation. We've built an enviable reputation of pioneering and providing vital services to the Internet community. We don't run a competing registry business and have no conflict of interest in the DNS market. We value transparency and neutrality and are committed to standards-based Internet development. Over the years, we have built one of the largest server footprints in the world, along the way developing unique skills, technical competence, and a newly tuned monitoring system.
